Summary

Early-career software engineer with one year of internship experience at Pacific Northwest National Laboratory building distributed, event-driven systems for real-world infrastructure. Strong hands-on background in Python development, systems integration, and AI-enabled tooling with LLM prompt and tool-calling workflows. Builder mindset focused on shipping reliable solutions, learning quickly, and delivering measurable user impact.

Technical Skills

Languages: Python, JavaScript, C/C++, C#, Java
AI & Agentic Systems: LLM workflows, prompt design, tool-calling architectures, structured output pipelines
Backend & Systems: Distributed systems, event-driven services, concurrent programming, API integration
Cloud & Infrastructure: AWS (Lambda, DynamoDB, S3, SNS), Docker, Linux
Data & Collaboration: MySQL, MongoDB, Git, technical documentation, cross-functional collaboration

Experience

Pacific Northwest National Laboratory — Jun 2025 – May 2026
Software Engineer Intern — *Bellevue, WA*

- Contributed to a distributed agent-based platform used for energy and building infrastructure operations
- Developed BACnet device discovery and scanning functionality to improve visibility across networked systems
- Implemented event-driven backend features and service integrations to improve reliability and fault tolerance
- Debugged cross-service issues in Linux environments, improving runtime stability and observability
- Collaborated with engineers and technical stakeholders to translate operational needs into implementable software tasks

Bellevue College — Feb 2024 – Mar 2024
Teaching Assistant – Programming Languages (C++) — *Bellevue, WA*

- Supported students with debugging and systems-level reasoning, including memory behavior and execution flow
- Communicated technical concepts clearly to mixed-experience audiences

Projects

VOLTTRON AI: Conversational Smart-Grid Control Interface | *Python, Pydantic AI, LLMs*

- Built an AI interface that translates natural language requests into structured platform actions
- Designed prompt and tool-calling patterns for agent, driver, and configuration workflows
- Implemented modular tools for diagnostics, control, and streaming responses to support practical operations

Cloud-Based License Plate Processing System | *C#, AWS*

- Developed an event-driven cloud pipeline for ingestion, processing, and storage
- Built asynchronous workflows across services to support scalable processing and reliable delivery

AI-Powered CLI Tooling | *Python*

- Developed deterministic command workflows with validation to improve reliability and safety
- Focused on iterative build-test-debug cycles to ship practical developer-facing automation

Education

Bellevue College — Bellevue, WA
Bachelor of Science in Computer Science — *August 2025*

- GPA: 3.54
