[Month Day, Year]

[Hiring Manager Name or "Hiring Manager"]

[Company Name]

[Company Address Line 1]

[Company Address Line 2]

Dear [Hiring Manager Name or "Hiring Manager"],

I am writing to apply for the [Job Title] position at [Company Name]. I am a Computer Science graduate from Bellevue College with experience in systems-level development, distributed systems, and networked infrastructure. I am excited about this opportunity because [1 sentence connecting your interests to the role/team mission].

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based system supporting real-world energy and building infrastructure. My work included developing a BACnet device discovery system, implementing networked services for distributed communication, and building event-driven backend components focused on reliability and scalability. I also worked in Linux environments to debug and troubleshoot system-level issues, improving runtime stability and service behavior.

Through these experiences, I developed a strong foundation in distributed systems, concurrency concepts, and debugging complex service interactions. I enjoy working close to the system level by understanding component interactions, diagnosing failures, and improving performance and reliability.

In addition, I have experience in C, C++, Python, and C#, and I am comfortable working across APIs, services, and asynchronous workflows. I value clean system design, observability, and building software that performs reliably under real-world constraints.

I would welcome the opportunity to contribute to [Company Name] as a [Job Title] and to learn from your engineering team. Thank you for your time and consideration.

Sincerely,
Igor Janotti

Quick Tailoring Checklist

- Replace [Job Title], [Company Name], and date.
- Add one role-specific line in paragraph 1 about why this team/product interests you.
- Optionally swap paragraph 2 bullet points to match the posting keywords (for example: reliability, analytics, distributed systems, automation, cloud, data pipelines).
- Keep total length to about 250-350 words.
