Hiring Manager
Cool Cat Fence
Seattle, WA

Dear Hiring Manager,

I am writing to apply for the IT Administrator & Developer position at Cool Cat Fence. I am a Computer Science graduate from Bellevue College with professional experience in backend systems, Python development, API integrations, and Linux infrastructure. The blend of software development and IT operations in this role matches exactly how I have worked at Pacific Northwest National Laboratory, and I am excited by the opportunity to help a fast-growing company build and maintain the systems that power its operations.

At PNNL, I contributed to a distributed, agent-based platform managing real-world energy and building infrastructure. I built networked services for inter-component communication, developed device discovery and scanning systems, and debugged system-level issues across services running in Linux environments. This work required strong troubleshooting skills, a clear understanding of how services interact, and the ability to ship reliable backend components under real operational constraints. I also designed and deployed event-driven backend features and worked closely with AWS (Lambda, DynamoDB, S3, SNS) for cloud-based data pipelines.

Beyond backend and infrastructure work, I have hands-on experience building automations and integrations in Python. My VOLTTRON AI project involved designing a tool-calling system that maps natural language requests to structured platform operations, implemented as a clean API layer between user intent and system actions. I also built my personal portfolio site in vanilla JavaScript, giving me a practical frontend foundation. I am actively learning Django and React Native and am comfortable picking up new frameworks quickly given a strong grasp of the underlying concepts.

I am drawn to Cool Cat Fence because you are building a genuinely tech-forward operation in an industry that is not traditionally software-driven. The opportunity to own integrations between platforms like ServiceTitan and Google Workspace, automate workflows, and help the company scale its internal tooling is exactly the kind of high-ownership, cross-functional work I want to do. I work well in fast-paced environments, take initiative, and enjoy the variety of a role that spans code, infrastructure, and day-to-day technical support.

I would welcome the chance to discuss how my background fits your team. Thank you for your time and consideration.

Sincerely,
Igor Janotti
