Hiring Manager
Grow Therapy

Dear Hiring Manager,

I am writing to apply for the Frontend Platform Engineer position at Grow Therapy. I am a Computer Science graduate from Bellevue College with a strong platform and systems engineering background, a year of industry experience at Pacific Northwest National Laboratory, and a genuine interest in building the infrastructure that lets product teams ship high-quality healthcare experiences with confidence. The scope of this role — design system architecture, web performance, developer experience, and AI-forward tooling — is exactly the kind of foundational platform work I want to own.

My clearest platform work is my personal portfolio site, which I built from scratch around a CSS custom-properties design system with tokens for color, spacing, border-radius, and transitions. Every component draws from the same token layer, enforcing visual consistency without per-component overrides. I implemented accessible interactive components including an aria-driven mobile nav, expandable timeline cards with keyboard navigation, and scroll-based section detection — following WCAG principles throughout. I also optimized for performance with passive event listeners, progressive enhancement, and no-framework vanilla JS to eliminate unnecessary bundle overhead. This reflects how I approach platform: design the right primitives once, make them easy to use correctly, and document them clearly.

At Pacific Northwest National Laboratory, I contributed to a distributed platform serving real-world energy and building infrastructure. I built services with clear interface contracts and consistent state boundaries, improved system observability by developing BACnet device discovery infrastructure, and maintained technical documentation to support team consistency and onboarding. I collaborated closely with engineers and stakeholders to surface issues early and align on quality before shipping.

I also bring hands-on AI-assisted development experience, including building a conversational control interface for VOLTTRON using LLM tool-calling and prompt engineering. I actively use GitHub Copilot and related tooling to accelerate iteration and focus on higher-leverage architectural problems, which aligns directly with Grow's approach to frontend development.

I am excited about Grow Therapy's mission and the opportunity to help build the platform foundation that scales a new brand experience in healthcare. I would welcome the chance to discuss how my background fits the team's work.

Sincerely,
Igor Janotti
