SUMMARY

Software engineer with a strong frontend platform foundation and a year of industry experience at Pacific Northwest National Laboratory. Experienced building systems-level frontend infrastructure, CSS design token architectures, accessible component libraries, and event-driven backend services. Background in AI-assisted development, performance optimization, and developer experience tooling. Systems thinker with a bias for reusable abstractions and a founder's ownership mindset.

TECHNICAL SKILLS

Frontend Platform: JavaScript/TypeScript, React, Next.js, HTML5, CSS3, CSS custom properties/design tokens, SSR

Performance & Observability: Core Web Vitals, bundle optimization, accessibility (WCAG/ARIA), responsive design

Build & Infra: Node.js, Docker, Git, AWS (Lambda, DynamoDB, S3, SNS), Linux, CI/CD pipelines

AI-Assisted Development: GitHub Copilot, LLM tool-calling workflows, prompt engineering, AI-accelerated iteration

Backend & Systems: Python, C/C++, C#, distributed systems, event-driven architecture, concurrent programming

EXPERIENCE

Pacific Northwest National Laboratory

Jun 2025 – May 2026

Software Engineer Intern

Bellevue, WA

- Contributed to a distributed agent-based platform serving real-world energy and building infrastructure at scale
- Developed platform-level services with clear interface contracts, consistent state boundaries, and reliable fault handling
- Built BACnet device discovery infrastructure, improving observability and coverage across networked system components
- Debugged cross-service runtime issues in Linux environments, improving stability, performance, and system observability
- Created and maintained technical documentation and implementation notes to support team consistency and developer onboarding
- Collaborated with engineers and stakeholders to align on interfaces, surface blockers early, and ship quality work

Bellevue College

Feb 2024 – Mar 2024

Teaching Assistant – Programming Languages (C++)

Bellevue, WA

- Guided students through systems-level reasoning, debugging practices, and consistent problem-solving approaches

PROJECTS

Personal Portfolio Website | *HTML5, CSS3, JavaScript*

- Built a mobile-first, accessible portfolio site with a CSS custom-properties design system: tokens for color, spacing, border-radius, and transitions enforcing consistent visual language across all components
- Implemented accessible platform components: aria-driven mobile nav toggle, expandable timeline cards with keyboard navigation, and scroll-driven active section detection
- Applied frontend performance practices: passive event listeners, smooth scroll behavior, progressive enhancement, and zero-framework vanilla JS to minimize bundle overhead

VOLTRON AI: Conversational Smart-Grid Control Interface | *Python, Pydantic AI, LLMs*

- Designed AI-native tooling infrastructure that translates natural language into structured platform actions via LLM tool-calling
- Leveraged AI-assisted development (Copilot, prompt engineering) throughout to accelerate iteration and improve code quality
- Built modular, extensible tool system for diagnostics, configuration, and streaming responses – designed for reuse and governance

Cloud-Based Event-Driven Processing Pipeline | *C#, AWS*

- Architected a multi-stage event-driven pipeline with clear interface contracts for ingestion, processing, and storage
- Built asynchronous service workflows to support scalable throughput, observability, and reliable delivery

EDUCATION

Bellevue College

Bellevue, WA

Bachelor of Science in Computer Science

August 2025

- GPA: 3.54
