Hiring Manager
CoreWeave

Dear Hiring Manager,

I am writing to apply for the Software Engineer, Inference AI/ML position at CoreWeave. I am a Computer Science graduate from Bellevue College with hands-on experience building distributed systems, networked services, and reliability-focused backend components in Python and C/C++-oriented environments. CoreWeave's mission to deliver high-performance infrastructure for AI innovators strongly aligns with my technical interests in scalable systems, low-latency services, and production reliability.

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based platform supporting real-world energy and building infrastructure. I implemented networked backend services, built event-driven components for reliable communication between system parts, and developed BACnet device discovery workflows for large sets of connected devices. I also debugged service-level bottlenecks and Linux runtime issues, improving system stability and operational behavior. This experience strengthened my ability to reason about concurrency, service boundaries, and performance trade-offs in production-like environments.

I also built VOLTTRON AI, a conversational control interface that maps natural language requests to structured platform actions through modular Python tool-calling and validation layers. This project required careful API design, robust error handling, and reliability-focused iteration. In a separate cloud pipeline project, I implemented asynchronous, event-driven workflows on AWS to process requests across multiple services, reinforcing patterns relevant to model-serving systems where throughput, latency, and resilience all matter.

I am excited by this role's focus on practical inference engineering: implementing scoped improvements, writing solid tests and documentation, instrumenting metrics, and learning from real operational feedback. I bring a strong systems foundation, clear ownership mindset, and curiosity about GPU inference concepts such as batching, caching, and streaming. I would welcome the opportunity to contribute to CoreWeave's Inference team and grow quickly alongside experienced engineers.

Thank you for your time and consideration.

Sincerely,
Igor Janotti
