Hiring Manager
Hunter Industries

Dear Hiring Manager,

I am writing to apply for the Software Engineer - Backend/Cloud Services position at Hunter Industries. I am a Computer Science graduate from Bellevue College with hands-on experience building distributed backend systems, cloud-connected services, and telemetry-oriented workflows in Python-focused environments. Hunter's mission to deliver reliable, intelligent irrigation systems through scalable cloud services strongly aligns with my interests in backend architecture, IoT-connected platforms, and practical reliability engineering.

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based platform supporting real-world infrastructure systems. I implemented backend service components in Linux environments, integrated networked systems, and developed BACnet device discovery workflows that improved device visibility and operational insight. I also built and refined event-driven logic and debugged production-like service issues to improve stability and performance under real constraints.

I bring practical AWS experience with Lambda, DynamoDB, S3, and SNS, including designing asynchronous data-processing workflows that support reliable ingestion and downstream processing. In project work, I built modular Python API and validation layers for a conversational control system, emphasizing clean service boundaries, robust error handling, and maintainable backend logic. These experiences map well to your focus on scalable APIs, telemetry ingestion pipelines, and reliable data synchronization between users, devices, and cloud services.

I value writing clean, testable code and collaborating across backend, mobile, and systems teams to deliver resilient products. I am also motivated by continuous improvement and customer impact, and I appreciate Hunter's focus on innovation and long-term product value.

I would welcome the opportunity to contribute to Hunter Industries' cloud-connected ecosystem and help build backend systems that are secure, reliable, and scalable. Thank you for your time and consideration.

Sincerely,
Igor Janotti
