SUMMARY

Software engineer with a strong frontend foundation and a year of industry experience at Pacific Northwest National Laboratory. Experienced building responsive, accessible web interfaces with JavaScript, CSS systems, and component-driven architecture. Background in AI-assisted development workflows, distributed systems, and event-driven services. Eager to bring craftsmanship, systems thinking, and a bias for action to frontend platform work.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, React, HTML5, CSS3, CSS custom properties, responsive design, accessibility (ARIA)

Tooling & Build: Node.js, Git, Docker, AWS (Lambda, DynamoDB, S3, SNS)

AI-Assisted Development: LLM workflows, prompt design, tool-calling architectures, AI-accelerated coding

Backend & Systems: Python, C/C++, C#, distributed systems, event-driven services, Linux

Core: Component architecture, performance optimization, cross-functional collaboration, technical documentation

EXPERIENCE

Pacific Northwest National Laboratory

Jun 2025 – May 2026

Software Engineer Intern

Bellevue, WA

- Built and maintained components in a distributed agent-based platform serving real-world energy and infrastructure systems
- Developed event-driven services with clear state boundaries, consistent interfaces, and reliable fault handling
- Wrote and maintained technical documentation and implementation notes to support team consistency and onboarding
- Collaborated with engineers and stakeholders to align on interfaces, surface issues early, and ship quality work
- Worked in Linux environments for deployment, debugging, and system-level diagnostics

Bellevue College

Feb 2024 – Mar 2024

Teaching Assistant – Programming Languages (C++)

Bellevue, WA

- Explained complex systems concepts to students at multiple experience levels with clarity and patience

PROJECTS

Personal Portfolio Website | *HTML5, CSS3, JavaScript*

- Designed and built a responsive, accessible portfolio site with mobile-first layout and smooth scroll behavior
- Implemented a CSS custom-properties design system with tokens for color, spacing, radius, and transitions, enabling consistent visual language across all components
- Built accessible interactive components including an aria-driven mobile nav toggle, expandable timeline cards, and keyboard-navigable section links
- Applied performance best practices: passive event listeners, progressive enhancement, and no-framework vanilla JS

VOLTRON AI: Conversational Smart-Grid Control Interface | *Python, Pydantic AI, LLMs*

- Built an AI-native interface translating natural language into structured platform actions using LLM tool-calling
- Leveraged AI-assisted development workflows throughout, using LLM tools to accelerate iteration and code quality
- Designed modular tool system for diagnostics, configuration, and streaming responses

Cloud-Based License Plate Processing System | *C#, AWS*

- Architected an event-driven cloud pipeline with clear stage interfaces for ingestion, processing, and storage

EDUCATION

Bellevue College

Bellevue, WA

Bachelor of Science in Computer Science

August 2025

- GPA: 3.54
