Hiring Manager
MANTECH
Fort Meade, MD

Dear Hiring Manager,

I am writing to apply for the Software Engineer position (Requisition R67657) at MANTECH. I am a Computer Science graduate from Bellevue College with hands-on experience building, integrating, and troubleshooting distributed software systems in Python-oriented and C/C++ environments. I am excited by the opportunity to contribute to mission-focused engineering work that improves internal systems and supports secure, reliable operations for intelligence customers.

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based system supporting real-world infrastructure. My work included implementing backend service features, integrating components across networked environments, and debugging defect reports affecting runtime behavior and reliability. I developed BACnet device discovery and scanning workflows, improved service diagnostics in Linux environments, and collaborated with engineers to document component behavior and improve process consistency.

I am comfortable working through the full software lifecycle for well-scoped tasks: analyzing requirements, translating them into design decisions, implementing and testing changes, and refining software based on observed issues. I also bring practical experience with cloud-connected systems, API-oriented development, and event-driven architectures. My projects include asynchronous processing pipelines on AWS and modular Python service tooling, which strengthened my ability to reason about performance, maintainability, and integration boundaries.

In addition, I have foundational experience relevant to your preferred stack, including frontend work in JavaScript (with exposure to React concepts), container usage with Docker, and basic Kubernetes familiarity. I value clean documentation, repeatable engineering practices, and collaborative execution across technical and stakeholder teams.

I would welcome the opportunity to contribute to MANTECH's software engineering mission and continue growing in a team that delivers high-impact technical solutions. Thank you for your time and consideration.

Sincerely,
Igor Janotti
