SUMMARY

Software engineer with experience building and debugging distributed, cloud-connected software systems in Python and C/C++ environments. Strong foundation in data structures, algorithms, Linux fundamentals, and networked services. Experienced implementing new features, resolving defects, integrating components, and producing clear technical documentation for reliable operations.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, C#

Software Engineering: Feature development, debugging, defect correction, code reviews, integration testing

Systems & Infrastructure: Linux, distributed systems, event-driven architecture, configuration management basics

Cloud & Platform: AWS (Lambda, DynamoDB, S3, SNS), Docker, basic Kubernetes familiarity

Data & Tooling: SQL queries, Git, CI fundamentals, technical documentation

EXPERIENCE

Pacific Northwest National Laboratory

Jun 2025 – May 2026

Software Engineer Intern

Bellevue, WA

- Implemented software components for a distributed agent-based system supporting energy and infrastructure operations
- Designed and modified backend services in Python-based environments to add capabilities and resolve defect reports
- Developed BACnet device discovery and scanning workflows to improve inventory visibility and system coverage
- Integrated networked services into existing runtime environments and improved reliability through targeted debugging
- Collaborated on system design decisions, documented technical behavior, and supported operational process improvements
- Used Linux tooling for diagnostics, deployment support, and performance analysis across service components

Bellevue College

Feb 2024 – Mar 2024

Teaching Assistant – Programming Languages (C++)

Bellevue, WA

- Assisted students with debugging, code structure, and systems-level reasoning around memory and execution flow

PROJECTS

Cloud-Based Event-Driven Processing Pipeline | C#, AWS

- Built an event-driven processing pipeline with asynchronous service stages for ingestion, transformation, and storage
- Implemented structured logging and fault-aware workflows to improve operational visibility and reliability

VOLTTRON AI: Conversational Control Interface | Python, Pydantic AI, LLMs

- Developed modular API and tool-calling layers that map user requests to validated system actions
- Improved maintainability with reusable components, clear validation boundaries, and documented integration behavior

Personal Portfolio Website | JavaScript, HTML, CSS

- Built responsive UI components and maintainable frontend architecture with attention to accessibility and performance

EDUCATION

Bellevue College

Bellevue, WA

Bachelor of Science in Computer Science

August 2025

- GPA: 3.54
