Hiring Manager
Pacific Northwest National Laboratory
Richland, WA

Dear Hiring Manager,

I am writing to apply for the Research Analyst 1 position in the Energy Resiliency and Engineering organization at Pacific Northwest National Laboratory. I am excited to apply because PNNL's mission-driven work in energy resilience, applied analytics, and science-to-solutions execution strongly matches the work I value most.

Over the past year, I completed an internship at PNNL where I contributed to distributed, agent-based systems supporting real-world energy and building infrastructure use cases. During that time, I developed a BACnet device discovery workflow, implemented networked services to improve coordination across components, and built event-driven backend features focused on reliability and scalability. I also worked in Linux environments to troubleshoot system-level issues, improve runtime stability, and support dependable operations.

That internship experience confirmed my interest in long-term work at PNNL. I want to continue contributing to the lab by supporting multidisciplinary teams with structured analysis, clear technical communication, and practical workflow improvements that strengthen mission outcomes.

In addition to systems development, I bring strong problem framing, technical writing, and cross-team collaboration skills. I am comfortable organizing complex technical information, turning requirements into actionable tasks, and delivering high-quality outputs in evolving project environments.

I would welcome the opportunity to continue my career at PNNL and contribute to the Applied Decision Systems and Analytics mission as a Research Analyst 1. Thank you for your time and consideration.

Sincerely,
Igor Janotti
