SUMMARY

Early-career analyst and engineer with experience supporting energy and infrastructure projects at Pacific Northwest National Laboratory. Background in applied analysis, systems-level problem solving, and technical communication across multidisciplinary teams. Skilled at translating complex technical information into structured workflows, actionable insights, and reproducible project artifacts.

RELEVANT SKILLS

Applied Analysis: Structured technical analysis, workflow design, decision-oriented problem framing, synthesis of multi-source information

Information Management: Documentation standards, artifact organization, reproducible reporting practices, technical note-taking

Technical Tools: Python, C/C++, C#, Java, Git, Linux, Docker, AWS (Lambda, DynamoDB, S3, SNS)

Systems & Integration: Distributed systems, event-driven services, concurrent programming, device/system integration (BACnet)

Communication: Cross-functional collaboration, briefing support, technical writing, stakeholder-facing summaries

EXPERIENCE

Pacific Northwest National Laboratory

Jun 2025 – May 2026

Software Engineer Intern

Bellevue, WA

- Supported applied research for energy and building infrastructure through development of distributed analysis and control capabilities
- Built BACnet device discovery and scanning workflows that improved visibility into operational technology environments
- Developed and maintained event-driven services used to coordinate data flow and improve system reliability across components
- Integrated technical information from device protocols, system behavior, and project requirements into implementable engineering tasks
- Produced technical documentation and implementation notes to support transparent handoff, maintenance, and team situational awareness
- Collaborated with engineers and technical stakeholders to prioritize issues, track progress, and resolve system-level defects

Bellevue College

Feb 2024 – Mar 2024

Teaching Assistant – Programming Languages (C++)

Bellevue, WA

- Guided students in debugging and analyzing C++ programs, with emphasis on structured reasoning and reproducible troubleshooting
- Explained technical concepts to mixed experience levels, improving clarity and decision-making during problem resolution

SELECTED PROJECTS

VOLTTRON AI: Conversational Smart-Grid Control Interface | *Python, Pydantic AI, LLMs*

- Developed a decision-support style interface to help users navigate and control smart-grid platform operations
- Designed structured tool-calling workflows that converted high-level requests into transparent, auditable system actions
- Implemented modular tooling for configuration, diagnostics, and reporting to improve traceability and operational awareness

Cloud-Based License Plate Processing System | *C#, AWS*

- Engineered an event-driven processing pipeline with clear stage boundaries for ingestion, transformation, and storage
- Created asynchronous service workflows to support reliable throughput and observable system status

AI-Powered CLI Tooling | *Python*

- Built command execution and validation workflows with deterministic behavior for repeatable task automation
- Focused on safe execution patterns and reproducible outputs for technical operations support

EDUCATION

Bellevue College
Bachelor of Science in Computer Science
– GPA: 3.54

Bellevue, WA
August 2025
