Hiring Manager
Salesforce

Dear Hiring Manager,

I am writing to apply for the AI Builder, Emerging Talent role at Salesforce. I am a Computer Science graduate from Bellevue College and an early-career engineer who enjoys building practical AI-enabled systems that solve real operational problems. The combination of agentic development, customer impact, and fast iteration in this role strongly aligns with how I like to work.

Over the past year, I completed a software engineering internship at Pacific Northwest National Laboratory where I built and supported distributed, event-driven systems for real-world energy and infrastructure use cases. I developed BACnet discovery workflows, implemented networked services, and debugged cross-service runtime issues in Linux environments. This experience strengthened my ability to ship reliable software, troubleshoot production-like behavior, and collaborate across technical teams.

I have also built AI-focused tools in Python, including a conversational interface for VOLTTRON that uses LLM prompts and tool-calling workflows to map user requests into structured system actions. This project deepened my understanding of prompt architecture, tool orchestration, and iterative testing required to make AI-powered systems dependable in practice.

I am excited by the opportunity to contribute in a builder pod, partner with customer-facing teams, and own work from design through deployment. I bring a strong builder mindset, clear communication, and a bias for execution. I am ready to learn quickly, adapt to new technical stacks, and deliver high-quality solutions that create measurable customer value.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background can contribute to Salesforce's AI Builder cohort.

Sincerely,
Igor Janotti
