Hiring Manager
Taara

Dear Hiring Manager,

I am writing to apply for the Systems Software Test Engineer position at Taara. I am a Computer Science graduate from Bellevue College with hands-on experience building and debugging distributed, device-oriented systems in Python and C/C++ environments. Taara's mission to expand connectivity through advanced optical communication is compelling to me because it combines systems software, real-world hardware constraints, and network reliability work at a genuinely ambitious scale.

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based platform supporting real-world energy and building infrastructure. My work included developing BACnet device discovery and scanning workflows, implementing event-driven backend components, and debugging cross-service issues in Linux environments. That experience strengthened my ability to reason about end-to-end behavior across software services and physical devices, isolate failures methodically, and improve system stability under operational constraints.

I also have strong Python experience building structured automation and validation-oriented tooling. In one project, I developed deterministic command-execution tooling focused on safe, repeatable behavior and robust handling of edge cases. In another, I implemented real-time control logic for a robot using sensor-driven feedback loops, which gave me practical experience working close to hardware signals and runtime behavior. Across these projects, I have consistently been drawn to the boundary where software correctness, observability, and physical-world behavior meet.

I would be excited to help Taara build automated validation frameworks, strengthen regression coverage, and improve confidence in the full path from software control to field reliability. I bring a strong systems foundation, comfort with Linux and networking fundamentals, and a careful, debugging-oriented approach to engineering quality.

Thank you for your time and consideration.

Sincerely,
Igor Janotti
