SUMMARY

Software engineer with experience validating and debugging distributed, device-oriented systems in Python and C/C++ environments. Strong foundation in Linux, networking fundamentals, automation, and systems-level troubleshooting. Experienced building reliable backend components, validating behavior across networked services, and working close to real hardware and operational constraints.

TECHNICAL SKILLS

Languages: Python, C/C++, C#, Java

Test & Validation: Automation scripting, structured validation flows, regression-minded debugging, deterministic tooling

Systems & Networking: Linux, TCP/IP, Ethernet fundamentals, distributed systems, concurrent programming, BACnet

Cloud & Dev Tools: AWS (Lambda, DynamoDB, S3, SNS), Docker, Git, CI fundamentals

Analysis & Diagnostics: Performance troubleshooting, system logs, telemetry-oriented debugging, SQL/NoSQL familiarity

EXPERIENCE

Pacific Northwest National Laboratory

Jun 2025 – May 2026

Software Engineer Intern

Bellevue, WA

- Contributed to a distributed agent-based system supporting real-world energy and building infrastructure
- Developed BACnet device discovery and scanning workflows to validate connectivity and improve visibility across networked devices
- Implemented event-driven backend components and networked services with focus on reliability, fault tolerance, and observable behavior
- Debugged cross-service issues in Linux environments, isolating runtime failures and improving stability under operational constraints
- Documented service behavior, troubleshooting findings, and implementation details to support repeatable engineering workflows

Bellevue College

Feb 2024 – Mar 2024

Teaching Assistant – Programming Languages (C++)

Bellevue, WA

- Helped students debug C++ programs by tracing memory behavior, execution flow, and correctness issues systematically

PROJECTS

AI-Powered CLI Tooling | *Python*

- Developed structured command execution tooling with input validation and deterministic behavior for repeatable automation workflows
- Focused on safe execution paths, predictable outputs, and robust handling of operational edge cases

FollowBot Companion Robot | *C++, Python*

- Implemented real-time navigation and sensor-driven control logic, validating behavior through hardware-adjacent feedback loops
- Built communication between hardware inputs and system state to improve responsiveness and runtime stability

Cloud-Based License Plate Processing System | *C#, AWS*

- Designed an event-driven processing pipeline and asynchronous workflows for ingestion, processing, and storage across services

EDUCATION

Bellevue College

Bellevue, WA

Bachelor of Science in Computer Science

August 2025

- GPA: 3.54
