Hiring Manager
Visa

Dear Hiring Manager,

I am writing to apply for the SW Test Engineer position on the Network Processing Platform & Reliability Test Engineering team at Visa. I am a Computer Science graduate from Bellevue College with experience building and debugging distributed systems, creating Python-based tooling, and validating networked services in Linux environments. The combination of software quality, automation, and close collaboration with development teams in this role is exactly the kind of engineering work I want to continue building on.

At Pacific Northwest National Laboratory, I contributed to a distributed, agent-based system supporting real-world infrastructure. My work included implementing networked services, developing BACnet device discovery and scanning workflows, and debugging issues across service boundaries to improve runtime stability and reliability. That experience taught me how to analyze failures systematically, work effectively with engineers across a codebase, and support software quality in environments where reliability matters.

I also have strong hands-on experience with Python and automation-oriented development. In my AI-powered CLI tooling project, I built structured command execution flows focused on validation, deterministic behavior, and safe interaction with system operations. In VOLTTRON AI, I developed modular Python components that translated user requests into validated platform actions, reinforcing disciplined debugging and integration thinking. Across these projects, I have consistently enjoyed building developer-facing tools and improving the repeatability and confidence of technical workflows.

I would be excited to contribute to Visa's Gateway Services testing efforts by building maintainable test scripts and automation, supporting integration validation, and partnering closely with development teams to resolve issues before release. I bring a strong coder's mindset, a solid foundation in data structures and systems, and a careful, analytical approach to quality engineering.

Thank you for your time and consideration.

Sincerely,
Igor Janotti
